CASE STUDY

# ACCURATE FEEDSTOCK RECORDS

See how Alera forms and dashboards were used to improve accuracy and usability of feedstock record

## THE PROBLEM

A mixture of manual written records, excel documents and staff changes led to issues with collecting accurate daily feedstock records used for both regulatory requirements and company invoicing.

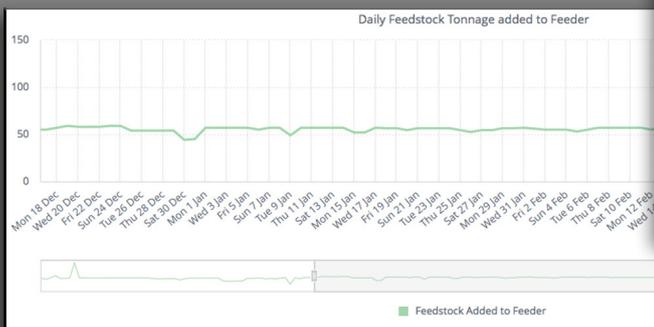

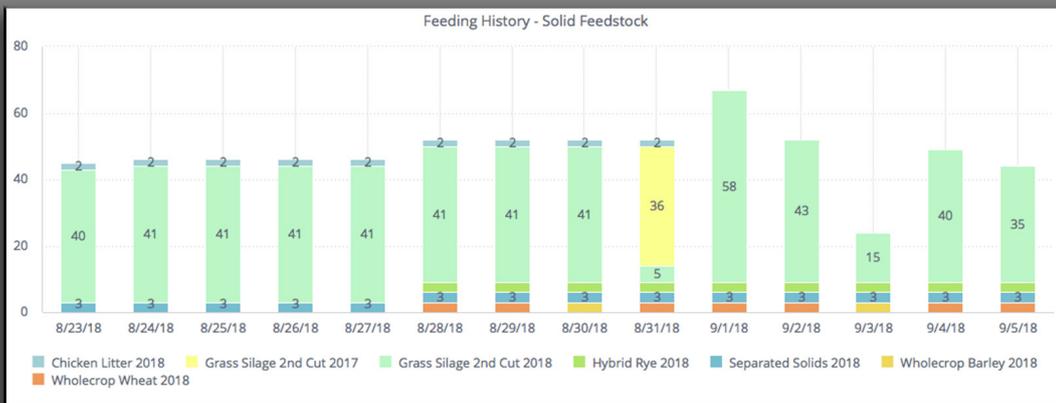

During weekends or holidays records didn't get fully completed, on occasions operator lost the manual records or accidental deleted the excel spreadsheet containing the data!

The company also had to use additional administrative resources to process the records each week causing delays in the time it was presentable to management.

The manual process was both cumbersome and time consuming and naturally subject to higher levels of mistakes.

## THE SOLUTION

A simple mobile App with feedstock record form was designed, allowing the operators to record a variety of feedstock information such as tonnages, types and quality whilst completing their normal daily operations. This App is located on both the operator's smartphones and the site tablet. It automatically collates the recorded data and seamlessly uploads to the Alera dashboard. The daily data received from the operators App is then processed automatically within Alera and presented to the various company stakeholders without any administrative burden. Operators can view feeding records leading to more accurate management of plant performance and biological control.

## THE BENEFITS

- ✓ ACCURATE RECORDS
- ✓ COSTS SAVED
- ✓ FLEXIBLE

# 01

---

### Data input accuracy improved

Variability between operations staff is removed as a “common” template application is used. For example, the removal of “typo” errors, the operators can simply select the feedstock on the App, no spelling mistake, no “I can’t read that”.

# 02

---

### Costs and Time savings

A daily reduction of at least 60 minutes of operators and administration time in having to manually record and transfer information, leading to immediate cost savings.

# 03

---

### Flexible and future proof

The simple design and flexibility of Alera allows changes and upgrades to be made quickly and cost effectively. Do you want to ask another question? Yes; it can be added to the App and automatically sent to the site operators.
